- Appearance:* the type is clear and readable; the paper is sturdy; the binding is semi-flexible, green with gold stamping and most attractive; there is a handy thumb-index.
- Verdict* of many satisfied users: "more than just a dictionary—a well-cross-referenced medical thesaurus."

THE BIMONTHLY OFFICIAL JOURNAL TO KEEP
YOU UP TO DATE IN HISTOCHEMISTRY

THE JOURNAL OF
**HISTOCHEMISTRY
& CYTOCHEMISTRY**

Official Journal of the Histochemical Society

Editor-in-Chief: R. D. Lillie

Assistant Editor: Robert W. Mowry

The expanding use of histochemistry is bringing together the data of morphology and of chemistry.

The cellular localization of many chemical materials, including enzymes, is now possible.

New fields are opened in normal and pathologic plant and animal histology.

Lesions not evident by the older morphologic methods, like the "chemical lesions" of Hopkins, are now demonstrated in tissue sections.

The recent histochemical demonstrations of dextran in the renal epithelium by a new method, as well as in a number of other locations, has added to our understanding of that blood substitute.

By adapting biochemical and biophysical methods to histology, histochemistry increases the knowledge of minute chemical anatomy.

The Journal covers all these and many other activities.

Features:

Original papers relating to the development and application of histochemical methods.

Occasional comprehensive review articles covering thoroughly important aspects of histochemistry.

Clear and helpful illustrations wherever needed. The most advanced procedures, such as those using radioactive tracer methods or electron micrography, included when they apply to histochemical investigations.

Clear, concise writing by competent authorities.

Bimonthly, one volume (of about 500 pp.) a year beginning January.

Volume 6 current in 1958.

Subscription price per volume \$8.00
