PHARMACOLOGICAL REVIEWS

INFORMATION FOR SUBSCRIBERS

PHARMACOLOGICAL REVIEWS is published in March, June, September, and December of each year. These four issues constitute one volume. *Annual Subscription Rates*—U. S. A. AND POSSESSIONS: personal, \$30.00; institutional, \$40.00; single copy, \$9.00. FOREIGN: personal, \$35.00; institutional, \$45.00; single copy, \$9.50. Institutional (multiple-reader) rate applies to libraries, schools, hospitals, clinics, group practices, and federal, commercial, and private institutions and organizations. Special rates of \$20.00 (U.S.A.) or \$25.00 (Canada), limited to three years duration, are available in the United States, Canada, and Mexico to graduate students in pharmacology and allied fields, including medical students, interns, residents, and postgraduate students. Orders from graduate students should be countersigned by their departmental chairman as verification of student status.

Change of address. The publisher must be notified 60 days in advance of a change in address. Copies that cannot be delivered because of an incorrect address will be destroyed. Duplicate copies, if available, may be purchased from the publisher at the regular price for single issues.

Correspondence regarding editorial matters should be addressed to the Editor, Dr. Paul L. Munson, Department of Pharmacology, F.L.O. Building 231-H, School of Medicine, University of North Carolina, Chapel Hill, North Carolina 27514.

Correspondence regarding subscriptions should be addressed to the publishers or their agents.

New subscriptions will begin with the March issue.

Renewals. Subscriptions should be renewed promptly since the publisher cannot guarantee to supply issues missed because of late renewals.

Reprints of individual articles are available *only* from authors.

Microfilm. For availability, inquire of The Williams & Wilkins Company.

Second class postage paid at Baltimore, Md. 21202 and at additional mailing offices

PHARMACOLOGICAL REVIEWS

SUGGESTIONS TO CONTRIBUTORS

Papers to be published in *Pharmacological Reviews* are, for the most part, invited by the Editor after consideration of recommendations from the Associate Editors and other consultants and evaluation of outlines and statements of central theme submitted by the prospective authors. Others who have an interest in writing for *Pharmacological Reviews* are also encouraged to send proposals to the Editor. After submission of the manuscript, it is reviewed by three or more experts in the field and, depending on their comments, revisions may be requested.

Articles in *Pharmacological Reviews* deal mainly with the current status of the subject under review. They are to be written clearly and concisely and should be intelligible to nonspecialists, with definitions of unfamiliar technical terms and explanations of difficult or controversial points included. At the same time, the review is to be sufficiently precise and detailed to command the attention and respect of experts in the field. Selective rather than exhaustive coverage of the literature is requested. Previous reviews of the subject and of related fields should be cited. Authors are asked to be critical of methods, results, and conclusions and to challenge accepted concepts where warranted. Conflicting points of view are to be presented objectively in good perspective. Deficiencies in the field may be pointed out and avenues for further work may be indicated.

When an invitation to write a review is accepted, the author is asked to estimate the time when the manuscript will be submitted. If it becomes necessary to extend the original deadline, the author should notify the Editor immediately and set a new deadline. Authors also are requested to provide the Editor with an estimate of the length of the review article. The usual length ranges between 12 and 50 printed pages, corresponding to about 40 to 150 manuscript pages.

Diagrams, tables, and, occasionally, illustrations may be included if necessary to bring out new concepts and important relationships, or when access by the reader to original sources would be unusually difficult.

Reference works used by the Editor for definitions, usage, spelling, and punctuation are as follows:

Webster's New Collegiate Dictionary, G. & C. Merriam Co., Springfield, 1977.

Webster's Third New International Dictionary, G. & C. Merriam Co., Springfield, 1971.

The Concise Oxford Dictionary, 6th ed., ed. by J. B. Sykes, Oxford University Press, Oxford, 1976.

Dorland's Illustrated Medical Dictionary, 25th ed., ed. by J. P. Friel, W. B. Saunders, Philadelphia, 1974.

Council of Biology Editors Style Manual: A Guide for Authors, Editors, and Publishers in the Biological Sciences, 4th ed., American Institute of Biological Sciences, Arlington, Va., 1978.

FOWLER, H. W.: *Modern English Usage*, 2nd ed., revised by Sir E. Gowers, Oxford University Press, Oxford, 1965.

STRUNK, W., JR., AND WHITE, E. B.: *The Elements of Style*, 2nd ed., Macmillan, New York, 1972.

Manuscripts to be published in *Pharmacological Reviews* must be written in the English language. For words spelled differently in current American and British usage, authors may follow either usage but are asked to do so consistently throughout the manuscript.

Manuscripts are to be typewritten, double-spaced, on white paper of good quality. The U.S.A. standard 8½- by 11-inch paper is preferred but the longer paper customarily used by authors from other countries is also acceptable. Each table is to be typed, double-spaced, on a separate sheet of paper. Legends for figures, footnotes in the text, and references are also to begin on separate sheets, all lines double-spaced.

On first mention of an unfamiliar drug in the text of the article, it is desirable to give the official or generic (nonproprietary) name by which the drug is known in the U.S.A. or the country of origin of the manuscript. This may be followed by parentheses in which may appear official or generic names of the drug in other countries, selected familiar trade names, and the chemical name. (A diagram of the chemical structure shown in a figure often will be preferable to the spelled-out chemical name.) Example for a manuscript from the U.K.: "Thiopentone sodium, B.P. (Thiopental sodium, U.S.P.; Pentothal sodium)." Thereafter, the author may use whichever nonproprietary name is thought most suitable without giving synonyms.

Arabic numerals are used for all definite weights, measurements, percentages, and degrees of temperature. All weights, volumes, doses, etc., are to be given in metric units. Whenever possible, doses should be related to unit weight, surface area, or other standard. The concentrations of solutions may be indicated as normal, molar, or %. If percentages are used, a notation should be included to indicate whether strict percentage (w/w), % by volume (v/v), or a given weight of solute in 100 ml of solution (w/v) is intended. It is generally desirable to express quantities in units that give the closest approximation to unity, e.g., 0.5 mg and 1.5 g rather than 0.0005 g and 1500 mg. Abbreviations should conform to internationally accepted usage, viz., kg, g, mg, µg, l, ml, µl, m, cm, mm, µ, mµ, Å, cm², cm³, etc. For per cent the symbol % should be used.

References to the literature cited are to be grouped at the end of the manuscript under the heading REFERENCES. They are to be arranged in alphabetical order and numbered consecutively. The proper order is to be determined by the following rules, which are to be applied in the sequence listed:

1. Arrange the references alphabetically according to the last name of the first author.
2. If there are two or more first authors with identical last names, arrange alphabetically according to the first authors' initials.
3. References with coauthors are to follow those by the first author alone. Arrange them alphabetically according to the first coauthors' names. If there are two or more papers with the same first two authors, arrange alphabetically according to the second coauthors' names, etc.
4. If there are two or more references by the same author, or by the same sequence of authors, arrange according to date of publication, the earliest paper first; if the date of publication is the same, an arbitrary order is to be chosen. References to "Unpublished observations" or to a "Personal communication" may follow other references by the same author or authors. Alternatively, they may be entered in the text in parentheses and omitted from the list of references.

It is advisable not to assign reference numbers until the manuscript is in final form. However, if it becomes necessary to add references after reference numbers have already been entered throughout the text, it is permissible to place the added references in the proper alphabetical position by assigning to each the reference number of the preceding reference, followed by a, b, etc. The use of such interpolated references is to be kept to a minimum.

The reference numbers are to appear in the text as full-sized figures in parentheses. Where two or more references are cited within the parentheses, they may be placed in a logical rather than numerical order. Inclusive numbers with a hyphen may be used to cite a numerical series of references. Example: (97, 11, 15-17, 83). The bibliographic citations are to include names and initials of all authors, full title of the article in the original language, abbreviated name of the journal, full

pagination, and year. Abbreviations for journals are to conform to those of *Biosis List of Serials* (from Biosciences Information Service of *Biological Abstracts*), modified by appropriate use of capital and lower case letters, accents, umlauts, and other diacritical marks.

Examples of references to books and chapters as well as to journal articles.

1. BACANER, M. B.: Treatment of ventricular fibrillation and other acute arrhythmias with bretylium tosylate. *Amer. J. Cardiol.* **21**: 530-543, 1968.
2. BROWN, R. H., JR., AND NOBLE, D.: Effect of pH on ionic currents underlying pacemaker activity in cardiac Purkinje fibers. *J. Physiol. (London)* **224**: 38P-39P, 1972.
3. CONNOR, J., BARR, L., AND JAKOBSSON, E.: Electrical characteristics of frog atrial trabeculae in the double sucrose gap. *Biophys.*

J. **15**: 1047-1067, 1975.

4. CRANFIELD, P. F.: *The Conduction of the Cardiac Impulse*, 404 pp., Futura Publishing Co., Mt. Kisco, N.Y., 1975.
5. WATANABE, Y.: Effects of electrolytes and antiarrhythmic drugs on atrioventricular conduction. *In Symposium on Cardiac Arrhythmias*, ed. by E. Sandøe, E. Flensted-Jensen, and K. H. Olesen, pp. 535-558, AB Astra, Södertälje, Sweden, 1970.

It is requested that at the time of submission of the completed manuscript it be in final form. The original typed manuscript (top copy) and at least one legible copy are to be submitted. Two additional copies would facilitate editorial work.

Authors of published reviews receive jointly 50 reprints free of charge.
