PHARMACOLOGICAL REVIEWS
Volume 34
1982

A9145C, chemical structure of (fig.), 227
Acetylcholine receptor enriched membranes, affinity phase partitioning of (fig.), 168
ACTH (1-25), [biotin³⁵] proposed structure of (fig.), 160
Adenine
  analogue binding proteins, relation to S-adenosylhomocysteine hydrolase, 234
  effect on S-adenosylhomocysteine hydrolase, 245
  nucleotides, effect on S-adenosylhomocysteine hydrolase, 245
Adenosine analogues
  of S-adenosylhomocysteine hydrolase, 237
  substrates, inhibitors, or inactivators of S-adenosylhomocysteine hydrolase (table), 241
Adenosylhomocysteine, S-
  analogues and, pharmacological properties of, 224
  analogues of, 225
  hydrolase chemical structure of (fig.), 226
  adenosine analogues as substrates, inhibitors, or inactivators of (table), 241
  binding properties of, 235
  catalytic mechanism, 230; (fig.) 230
  distribution and tissue level, 233
  enzyme catalysis, 229
  gene localization of, 236
  kinetic properties of, 235; (table) 235
  microorganisms, distribution and tissue level in, 233
  nucleoside analogues of, 239
  physicochemical properties of, 234; (table), 235
  plants, distribution and tissue level in, 233
  relation to adenosine analogue binding proteins, 234
  role in intermediary metabolism, 220
  role of, in intermediary metabolism (fig.), 232
  S-adenosylhomocysteine and, pharmacological and biochemical aspects of, 223
  subcellular localization of, 233
  substrates, inhibitors, and inactivators of, 236
  vertebrates, distribution and tissue level in, 233
Adenosyl-l-methionine, S-
  chemical structure of (fig.), 227
Adenosyl-l-methionine, S-, effect on S-adenosylhomocysteine hydrolase, 245
β-Adrenergic receptor. See under Receptor
Adrenergic response to salt intake, 290
Adrenergic system and renin-angiotensin-aldosterone system, redundancy of, 295
Age and response of blood pressure to salt loading, 292
Agranulocytosis, drug-induced, 92
β-Alanine effect on neural activity, 273
Aldosterone
  general considerations, 295
  release, angiotensin II and III on, 294
  renin, angiotensin axis, and, 293
Allergenicity testing, evaluation of immunotoxic effects, 131
Allergic reactions in man, 85
Allogeneic cells, effect of diethylstilbestrol on lymphoproliferative response to (fig.), 143
Alprenolol, ['H], inhibition of binding of, to antibodies and receptors by anti-idiotypic antibody (table), 83
Alprenolol
  linked to agarose, proposed structure of (fig.), 160
  agarose, proposed structure of (fig.), 160
Amine neurons, biogenic, location in relation to respiratory cell groups (fig.), 259
Amino acid(s)
  effects on neural activity, 272
  sequences
    in complementarity-determining regions (fig.), 78
    murine A/J anti-Ars Id¹⁰⁻¹⁵
      monoclonal antibody heavy chains (fig.), 44
      monoclonal antibody light chains (fig.), 44
    murine A/J anti-Ars Id¹⁰⁻¹⁵
      monoclonal antibody heavy chains (fig.), 44
      murine A/J anti-Ars Id¹⁰⁻¹⁵
      monoclonal antibody light chains (fig.), 44
  substitutions in the mouse Vλ region, location and nature of (fig.), 25
γ-Aminobutyric acid localization, 270
respiratory effects of, 270
p-Aminohippurate
  accumulation of
    by kidney slices and tubule suspensions, 328
    effect of metabolites on, 331
    effect of sodium and potassium on, 328
    renal handling of, 326
  transport of
    across the luminal membrane, 330
    by microperpfusion, study of kinetics of, 326
    effect of ouabain on, 329
    energization of, 329
    transtubular, 327
  tubular secretion of
    across the basolateral and luminal membrane, model (fig.), 327
    localization of, 327
    urate and, 332
  uptake of, by basolateral and luminal membrane vesicles suspended in different media (fig.), 329
Analgesics, narcotic. See Narcotic analgesics
Anaphylaxis, drug allergy, 91
Anemia, hemolytic, drug allergy, 94
Angiotensin
  general considerations, 294
  renin, aldosterone axis, and, 293
Angiotensin II and III, on aldosterone release, 294
Animal, intact, metabolic differences, 203
Anions, organic. See Organic anions
β-Antagonists and agonists, structures of (fig.), 82
Antibiotics, renal excretion of, 341
Antibodies
  antidigoxin, action mechanism of, 110
  applicability to environmental toxins, 112
  as drugs, 83
  cardiac myosin-specific, imaging of myocardial infarcts with, 78
  effects on drug pharmacokinetics, 111
Antibodies—continued
experimental effects of, 109
formed in response to simple antigenic stimulus (fig.), 78
heterologous and monoclonal, specificity of, to a V_{H} determinant on
murine anti-(1 → 3) dextran antibodies (table), 117
in vivo, 77
monoclonal (table), 117
neutralization of biologically active molecules (tables), 110
specific antagonists
clinical experience, 112
of toxins, drugs, and hormones, 109
specificity, 77
Antibody complementarity versus antibody diversity, 23
Antigens, T-dependent and T-independent, effect of benzo(a)- and
benzo(e)pyrene on primary antibody plaque-forming cell re-
response to, (fig.), 144
Arabinofuranosyladenine, 9-β-D-, analogue of S-adenosylhomocysteine
hydrolase, 237
Autoimmunity, drug-induced, 94
Barter's syndrome, excessive renal production and, 299
"bay region" hypothesis, metabolic toxification of polycyclic aromatic
hydrocarbons, 199
Behavior, response to stress, 290
Benzo(a)pyrene
biological reactivity
of different benzo-ring metabolites of (table), 200
of primary metabolites and/or derivatives of (table), 200
chemical structure (fig.), 197
covalent binding, 198
effect of exposure
in vivo, on immune function and host resistance parameters (table), 144
on primary antibody plaque-forming cell response to T-dependent
and T-independent antigens (fig.), 144
on rejection of DBA skin grafts (table), 145
on T-dependent antibody plaque-forming cell (table), 145
formation of metabolite-nucleoside adducts in experimental systems
(table), 203
metabolism of 198
diol-epoxide pathway of, 199
selected aspects of (fig.), 198
metabolites, biological reactivity, 199
structure of (fig.), 144
toxification of, 197
by hydroxylation of methyl side chains of certain alkylated hydro-
carbons, 201
intracellular localization of, 204
mechanisms not related to drug-metabolizing enzymes, 201
via free-radical pathway at carbon-6 position, 201
Benzo(a)pyrene-7,8-diol-9,10-epoxide
"bay-region" hypothesis for the metabolic toxification of polycyclic
aromatic hydrocarbons, 199
effect of modifications of, on DNA and RNA (table), 207
Benzo(e)pyrene
effect of exposure
in vivo, on immune function and host resistance parameters (table), 144
on primary antibody plaque-forming cell response to T-dependent
and T-independent antigens (fig.), 144
structure (fig.), 144
Beyer, Karl H., Jr., and Jacob D. Peuler. Hypertension: Perspectives,
287
Biotinylinsulin, NaB'-, proposed structure of (fig.), 160
Blood pressure
behavioral correlates, 290
effect of
preimmune serum on, in salt-depleted dogs (fig.), 81
renin-specific antiserum on, in salt-depleted dogs (fig.), 81
renin-specific Fab, in sodium-depleted dogs (fig.), 81
salt intake, 290
environmental influence, 289
genetic control of, 288
heritable influence, 288
response to salt loading
age and, 292
kidney and, 293
See also Hypertension
B lymphocytes, membrane immunoglobulins on, 65
B lymphoid cells, human, shedding of cross-linked membrane immu-
noglobulins M and D, 68
Bone marrow
cellularity, mouse, after diethylstilbestrol exposure (table), 142
chimeras
adaptive differentiation of lymphocytes in, 53; (fig.) 53
radiation, GLT-specific antibody response (fig.), 58
Boorman, Gary A. See Dean et al., 137
Boxill, Gale C. See de la Iglesia et al., 5
Breese, George R. See Mueller et al., 255
Brophy, Gregory T. See de la Iglesia et al., 5
Butler, Vincent P., Jr. Antibodies as Specific Antagonists of Toxins,
Drugs, and Hormones, 109
Cancer, interferon application for, 127
Cantor, Harvey. Specific Regulation of Immune Responses by Products
of T Cell Clones, 53
Carcinogen(s)
covalent binding effects of, on biologically important macromole-
cules, 206
methods to detect formation of reactive intermediates from (table), 195
pharmacokinetics of, 205
Carcinogenesis
chemical, experimental methods used for study of, 208
DNA-binding, mutagenesis, malignant transformation, and, relations-
ships amongst, 208
etiologic role of metabolism of polycyclic aromatic hydrocarbons in,
189
metabolic reactions, role in (table), 191
mutagenesis, malignant transformation and, correlations among, 209
skin, DNA binding and, 210
Cardiac myocyte, ischemic, from prolonged exposure to nitrogen (fig.), 78
Cardiovascular development, 288
Cat(s), intermediary characteristics of urate excretion, 332
Catecholamine(s)
calculated diffusion of, into cardiac muscle from single catechol-
amine-glass beads (fig.), 165
immobilized, polymeric, 172
glass-bead-immobilized, action mechanism of, 161
structural activity relationships, 175
Cell(s), intact, metabolic differences, 203
Cell-cell interactions, genetic control of, 51
Cell cultures, metabolic differences in, 203
Cell interaction, immune response phenotypes and, parallelisms, 57
Cell-mediated immunity
evaluation of
immune alteration after chemical exposure, 140
immunotoxic effects, 132
Cell membrane, sodium and potassium flux across, hypertension and,
300
Chemicals
exposure to, evaluation of immune alterations after, 138
immunotoxicity, procedures available for examination of, 137
Clone interferon. See under Interferon
Drug(s)—continued
  immobilized—continued
    therapeutic uses, 174
    proposed mechanisms for (fig.), 158
    proposed structures of some (fig.), 160
    on solid polymers, 179
    receptor interactions, 167
    solid phase (table), 155
    structural activity relationships for, 175
    use in understanding sites and mechanism of drug and hormone
    action, 177
  immunotoxicity, procedures available for examination of, 137
  inhibition of net reabsorption of urate by, 334
  pharmacokinetics, effects of antibodies and Fab fragments on, 111
  polymeric
    immobilized, 171
    model for design of (fig.), 174
    pharmacological uses of (table), 171
    targeting of, as chemotherapeutic agents, 173
  reactions
    acute systemic, simulating allergy, 99
    allergic, general mechanism of, 85
    lymphoid cells and, 98
    organ-directed, suspected to be allergic, 97
    safety evaluation, application of immunology for, 7
    sepharose and glass-bead immobilized, leakage rates from (fig.), 162
  Drug-induced autoimmunity, 94
  Drug-induced changes in inspiration, 257
  Drug-metabolizing enzymes, 190
  Drug-receptor interactions, attempts to localize to a particular cell
  type, 178

Effector response, biological activity of immobilized drug, 154
Electrochemical gradient, urate reabsorption against, 334
Endorphin(s)
  localization, 277
  physiological-pathological interactions, 278
  respiratory effects, 277
Enkephalin(s)
  localization, 277
  physiological-pathological interactions, 278
  respiratory effects, 277
Environment, influence on blood pressure, 289
Enzyme(s)
  cellular, activation of proteins of the contact system by, 40
  drug-metabolizing, 190
  identity of converting, with kininase II, 294
  immobilized, therapy with, 178; (fig.), 180
Enzyme systems, toxification of polycyclic aromatic compounds by
  (table), 196
Epinephrine
  azo-bond reduction of glass-bead immobilized, and structure of 6-
  aminopinephrine (fig.), 176
  azo-, polymeric, gel chromatography of (fig.), 173
  effects on respiration, 267
  location of, 268
  physiological-pathological interactions, during respiration, 270
  respiratory effects of, 268
Epinephrine-glass beads, [14C]
  effect of temperature on release rate of (fig.), 162
  HCl wash profile of (fig.), 162
L-Epinephrine-glass beads, proposed structure of (fig.), 160
Erythrocyte membrane
  sodium-lithium counter-transport, 301
  sodium-potassium co-transport, 301
Escherichia coli, α-interferon cloning in (table), 120
Estradiol
  dextran-, proposed structure of (fig.), 160

INDEX
p-aminobenzyl, diazotized to p-aminobenzyl cellulose, proposed
structure of (fig.), 160
poly styrene immobilized, proposed structure of (fig.), 160
Estradiol receptors, affinity chromatography and affinity phase
partitioning, 170
Fab fragments, effects on drug pharmacokinetics, 111
Furosemide, interaction with indomethacin, 298
Gefer, Malcolm L. See Huang et al., 43
Gene(s)
  encoding the cross-reactive idio type, analysis, 43
  localization of S-adenosylhomocysteine hydrolase, 236
Genetic control, cell-cell interactions, 51
Genetic restrictions, immunocompetent cell interactions, 51
Genetics, blood pressure control, 288
Glass bead(s)
  biological activity of drugs, hormones, and neurotransmitters while
  covalently coupled to, 155
  immobilized drugs, drug leakage rates from (fig.), 162
  immobilized catecholamines, mechanism of action of, 161
Glutamate, effect on neural activity, 273
Glycine, effect on neural activity, 272
Haber, Edgar. Antibodies in Vivo, 77
Horizons in Immunotoxicology: Research Needs and Applications
  (panel discussion), 149
Haber, Edgar, and Emil A. Pfitzer. Introductory Remarks, Workshop
  on Immunological Aspects of Toxicology, 3
Hageman factor
  kalikrein and, assembly and activation of (fig.), 40
  sequences of activation of components of (fig.), 40
Heart
  muscle, inotropic responses in, 178
  myocardial infaracts with cardiac myosin-specific antibodies, imaging
  of, 78
Heavy chains, variable region of, variability at different positions for
  (fig.), 26
Hedner, Jan. See Mueller et al., 255
Hedner, Thomas. See Mueller et al., 255
Hematologic examinations, evaluation of immunotoxic effects, 131
Hematologic reactions, drug allergy, 91
Hemolytic anemia, drug allergy, 94
Heredity, influence on blood pressure, 289
Hippurate(s)
  system, receptor site of, model for, (fig.), 345
  transported, general formula of, 344
Histopathologic examinations, evaluation of immunotoxic effects, 131
Hite, Mark. See de la Iglesia et al., 5
Ho, Monto. Recent Advances in the Study of Interferon, 119
Hormone(s)
  antibodies as specific antagonists of, 109
  biological activity while covalently coupled to
    glass beads, 155
    solid support, 155
    sepharose, 155
  supporting matrices, 154
  drugs and, use of immobilized drugs in understanding the sites and
    mechanism of action, 177
  immobilized
    affinity isolation of receptors and cells (table), 156
    direct interactions with their receptors, 170
    insolubilized and, 153
    proposed structures of some (fig.), 160
    solid phase (table), 155
    natriuretic, relation to hypertension, 300
See also under specific Hormone
Host resistance parameter(s)
effect of diethylstilbestrol on (fig.), 143
in vivo exposure to benzo(a)- and benzo(e)pyrene (table), 144
in vivo exposure to diethylstilbestrol (table), 141
in vivo exposure to 12-O-tetradecanoylphorbol-13-acetate (table), 146
12-O-tetradecanoylphorbol-13-acetate on (table), 147

Huff, J. E. See Moore et al., 13
Humoral immunity
evaluation of
immune alteration after chemical exposure, 140
immunotoxic effects, 132
Hybridoma(s)
application of technology of, to dissection of murine response to a simple polysaccharide (fig.), 117
production of (fig.), 116
revolution in reagent production, 115
Hydrocarbon(s)
polycyclic
aromatic, DNA binding and biological activities of (table), 210
chemical structures of several (fig.), 197
pathways of toxification of, 196
reactive metabolites of, 196
Hydroxybenzoate, m-, renal tubule reabsorption of, 338
Hydroxyprazinato, 5-, renal excretion of, 339
Hypertension
central sympathetic involvement, 290
natriuretic hormone, 300
neurogenic considerations, 289
perspectives, 287
relation of kallikrein-kinin system, 296
relation of salt to, 291
relation to salt and water excretion, 291
renovascular, effect of renin-specific antiserum on, (fig.), 81
salt and water balance, 291
See also Blood pressure
sodium and potassium flux, across cell membrane, importance of, 300
sodium transport in leukocyte, 302
Hypertension management
anticipation of, 304
need, general statement, 302
public awareness approach, 303
therapy, 304
Idiotype expression, control of, 45
IgG, molecule, human, four-chain structure of (fig.), 24
Immobilization
chemistry of, 159
drugs, hormones, and neurotransmitters, 153
history of, 153
Immunocompetent cell interactions, genetic restrictions on, 51
Immunodeficiency disease, defects of purine metabolism associated with, 245
Immune alteration(s)
comprehensive panel for evaluation of, after chemical exposure, 138
evaluation after chemical exposure
bone marrow progenitor cell assays (table), 138; 139
cell-mediated immunity, 140
humoral mediated immunity, 140
macrophage function assays, 140
pathotoxicology (table), 138; 139
procedures for definition of, evaluated at National Institute of Environmental Health Sciences (table), 138
Immune function
effect of in vivo exposure to
benzo(a) and benzo(e)pyrene on (table), 144
diethylstilbestrol (table), 141
12-O-tetradecanoylphorbol-13-acetate (table), 146
Immune response(s)
analysis of, at the molecular level, 43
phenotypes, cell interaction and, parallelisms, 57
specific regulation of, by products of T cell clones, 63
Immunoglobulin(s)
membrane
expression and dynamics of, 65
on B lymphocytes, 65
Immunoglobulin D
immunoglobulin M and, cross-linked membrane, shedding of, in human B lymphoid cells, 68
membrane, 66
membrane immunoglobulin M and, simultaneous expression of, 67
Immunological aspects of toxicology, workshop, 1-151
Immunology
application to clinical problems, implications for drug safety evaluation, 7
fundamental, building blocks for potential application to toxicology, 5
horizons in research needs and applications (panel discussion), 149
toxicology and, workshop, 1-151
Immunotherapy, selective T-cell subset manipulation, 21
Immunotoxic effects
cell-mediated immunity, 132
evaluation by
autoimmunity, 134
complement, 135
contact allergenicity, 131
hematological and histopathological examinations, 131
humoral immunity, 132
pharmaceutical industry, 131
polymorphonuclear leukocytes, 135
reticuloendothelial system, 134
serum biochemical examinations, 132
species used, 131
survey approach, 131
Immunotoxicity, procedures available to examine drugs and chemicals, 137
Immunotoxicity testing
autoimmunity (fig.), 134
cell-mediated immunity (fig.), 136
complement (fig.), 134
contact allergenicity (fig.), 134
hematology and histopathology (fig.), 133
humoral immunity (fig.), 135
lymphoid cell populations, enumeration of, (fig.), 134
polymorphonuclear cell function (fig.), 134
reticuloendothelial system (fig.), 136
stage of evaluation and species (fig.), 133
summary of data from 26 laboratories (figs.), 133-136
typical screen for (table), 136
Immunotoxicology
program, of the National Toxicology Program, 15
safety evaluation and, 11
Immunotoxicology study
diethylstilbestrol, 141
phorbol esters, 145
Indomethacin, interaction with furosemide, 298
Inflammatory disease and plasma proteins, 39
Inflammatory injury, pulmonary, participation of the contact system in, 41
Inorganic phosphate, effect on S-adenosylhomocysteine hydrolase, 245
Inosine, effect on S-adenosylhomocysteine hydrolase, 245
Insulin
formation of "super active" (fig.), 166
Insulin—continued
immobilized, insulin receptors and, 169
linked to agarose via B1, phenylalanine and B2, lysine to various
length tracer groups (fig.), 160
porcine, primary structure showing possible attachment to sepharose
beads and tryptic sites (fig.), 177
sepharose, immunoreactive insulin, soluble, liberation of (fig.), 162
mechanism of action of, 163
sepharose beads rate of insulin dissociation from (fig.), 162
structural activity relationships, 176
Interferon
action mechanism, 121, 122
antiviral actions of (fig.), 121
application of, in virus infections, 126
biological scope, 122
biological significance, 123
clinical application of, 126
in cancer, 127
cloning of, 120
definition, 119
effects of (table), 122
half-life during the α and β elimination phase, calculation of, 124
inducers and induction of, 120
pharmacokinetics of, 124
study of, recent advances in, 119
toxicity of, 125
Interferon, α-
cloned, host range of (table), 120
cloning of, in Escherichia coli (table), 120
Isoproterenol
gel permeation chromatography purification of (fig.), 173
isoproterenol derivative and, proton magnetic resonance spectrum of
aromatic region of (fig.), 176
linked to agarose, proposed structure of (fig.), 160
proposed structure of, after diazotization to p-aminophenylalanine in
a random copolymer of hydroxypropylglutamine with
p-aminophenylalanine (fig.), 172
