

BY THE PHYSICIAN WHO FIRST OBSERVED THE REMARKABLE
DIURETIC PROPERTIES OF THE ORGANIC MERCURIALS

Diuretic Therapy

The Pharmacology of Diuretic Agents and
The Clinical Management of the Edematous Patient

By **ALFRED VOGL, M.D.**, Assistant Professor of Clinical Medicine, New York University College of Medicine; Associate Visiting Physician, Third Medical Division, Bellevue Hospital. Formerly Associate Visiting Physician, Policlinic Hospital, Vienna; and Clinical Assistant, Guy's Hospital Medical School, London

Edema: classification, pathogenesis and principles of treatment

Indications for diuretic treatment

Pharmacology of the diuretic drugs—their action and relative effectiveness

Antidiuretic agents

The practice of diuretic therapy: the role of rest; low salt diet; cation-exchange resins; mechanical removal of transudates and edema fluid; organic mercurials; acidifying salts; xanthines; management of refractory edema.

Comprehensive coverage in a nutshell: readable, thorough, up to date and well documented. Tremendously useful in the treatment of heart, kidney, liver, etc.

255 pp., 5 figs., \$5.00

BEST AND TAYLOR
The Physiological Basis
of Medical Practice

SIXTH EDITION

In the preparation of this sixth edition of Best and Taylor, the book has undergone the most extensive revision since it was first published. Many figures have been redrawn; new ones have been added. The bulkiness of the book has been decreased by the deletion of older material and by a reduction in size of tables and illustrations. The index has been revised and enlarged. For convenience, the chapter number has been printed at the top of each page.

A remarkable correlation of clinical application and physiological principle, the sixth edition again earns for Best and Taylor the rank of a medical classic.

*Reviewers of earlier
editions have said:*

... no book so completely provides the link between the clinician in practice and the interpreter of physiologic mechanisms in the laboratory as does this immensely useful volume.

Arch. Int. Med.

... the epitome—the *ne plus ultra*—of physiology texts.

Chicago M. School Quart.

Here is work which needs no laudatory remarks. It can and does stand on its own merits.

Eye, Ear, Nose & Throat Monthly.

... an impressive feat of skill and scholarship. *Bull. Johns Hopkins Hosp.*

... a 'must' book for every doctor's library. *New York State J. Med.*

*By Charles H. Best, F.R.C.P.
and Norman B. Taylor, F.R.C.P.*

1370 pp. Over 600 figs. \$12.00
